MARKETING MANAGEMENT PROJECT

Competitive Marketing Strategy & Positioning Analysis

boAt vs Noise in India's Wearables and Audio Market

STP Analysis | Marketing Mix (4Ps) | Branding & Consumer Perception | Strategic Recommendations

Submitted by	Madhur Amlan Nayak

Title	Competitive Marketing Strategy & Positioning Analysis (boat vs Noise in India's Wearables and Audio Market)
Subject	Marketing Management
Year	2026
Research method	Secondary research (IDC India trackers, company filings as reported in the press, industry case studies)

Executive Summary

This project compares the marketing strategies of **boAt** (Imagine Marketing) and **Noise** (Nexxbase Marketing), India's two leading homegrown consumer-electronics brands. It applies the STP framework, the 4Ps marketing mix and a branding lens to explain why the two brands, born in the same city (Gurugram) and the same era (2014-2015), now lead different parts of the market.

Headline finding: boAt wins on **breadth, audio and brand strength** (29.2% of all wearables, leader in TWS and over-the-ear audio, larger marketing budget, stronger profitability). Noise wins on **smartwatches** (26.6% share versus boAt's 14.1% in CY2025) through a value-for-money, digital-first model, but its revenue fell 24% in FY25 and its smartwatch lead has narrowed. The report closes with four recommendations for Noise.

1. Introduction

1.1 The wearables and audio market in India

India is one of the world's largest markets for wearable devices (smartwatches, true wireless earbuds, neckbands, headphones, wristbands). According to IDC India, the market shipped **114.2 million units in 2025**, a 4.0% decline year-on-year and the second straight annual fall, as smartwatch shipments dropped 17.6% after years of entry-level saturation. In Q2 2026 shipments fell a further 7.4% to 24.7 million units, while advanced smartwatches grew 94.8% off a small base. In other words, volume growth has stalled, but value is moving to premium products. That shift is why positioning now matters more than price alone.

1.2 Why boAt and Noise?

- **Market leaders:** by IDC's count they are the two largest Indian brands in the category, with boAt #1 in overall wearables and Noise #1 in smartwatches.
- **Similar origins, different paths:** both are D2C-born, Gurugram-based and built on e-commerce, yet boAt chose lifestyle-audio and celebrity-led branding while Noise chose smartwatches and a lean, product-led growth model.
- **Rich public data:** IDC market-share releases, boAt's IPO filings and Noise's regulatory financials make a data-backed secondary study possible.

Metric	boAt (Imagine Marketing)	Noise (Nexxbase)
Founded / HQ	2014-15, Gurugram (co-founders Aman Gupta, Sameer Mehta)	2014, Gurugram (Gaurav and Amit Khatri)
Origin	Audio accessories sold on Amazon and Flipkart	Phone cases and accessories on e-commerce
Funding	Warburg Pincus, Fireside Ventures, Qualcomm; IPO filed with SEBI (up to Rs 1,500 cr)	Bootstrapped until Dec 2023; strategic investment from Bose (USD 10 mn, then USD 20 mn in 2025)
FY25 revenue	Rs 3,098 cr (consolidated)	Rs 1,048 cr (down 24%)
FY25 profit	Rs 60 cr consolidated net profit (after two loss years)	Rs 3.2 cr (helped by a Rs 47 cr tax gain)
Market rank (IDC, CY2025)	#1 overall wearables (29.2%); #2 smartwatches (14.1%)	#1 smartwatches (26.6%)

2. STP Analysis

2.1 Segmentation of the market

The Indian wearables and audio customer base can be segmented on three dimensions. Both brands compete across all segments, but with different weightings.

Basis	Segments	Relevance to boAt vs Noise
Demographic	Age 16-35 (students, first-jobbers), 25-40 working professionals; Tier-1 metros vs Tier-2/3 towns; income-based (entry, mid, upper-mid)	Both target mainly 16-35 year-olds. boAt skews to college and early-career buyers; Noise's smartwatch buyer is slightly more health- and utility-minded.
Psychographic	Style/trend-conscious, fitness-oriented, tech-enthusiast, brand-aspirational, value-seeker	boAt owns the style and music-lover identity ('boAtheads'); Noise owns the practical, feature-for-money wearable identity.
Behavioural	Purchase occasion (festive sales, first smartwatch, upgrade), channel preference (Amazon/Flipkart, quick-commerce, offline), usage (workout, commute, gaming), price sensitivity	Sale-driven online buying favours both; replacement cycles are lengthening, so upgrade-led premium demand is the next battleground.

2.2 Targeting strategy

	boAt	Noise
Strategy	Differentiated / broad coverage: one brand spanning budget to mid-premium audio, wearables, speakers, chargers and the premium 'Nirvana' sub-line	Concentrated-plus-differentiated: smartwatch first, then earbuds, and now premium via the Bose partnership and the Luna smart ring
Core target	Youth (18-30), Bollywood and cricket fans, music and gaming lovers	Digitally savvy, feature-seeking young adults; fitness and health-tracking users
Expanding into	Premium audio (Nirvana is reported to be about a quarter of its premium range), new categories (projectors, smart home), GCC markets	Premium audio ('Sound by Bose'), smart rings, wider offline presence (about 20,000 stores per the CEO, Apr 2025)

2.3 Positioning

boAt is positioned as an *affordable-aspirational lifestyle brand*: 'good-looking, loud, youthful audio you can afford'. It has avoided the cheapest tier and has described itself as the 'Zara of electronics'. **Noise** is positioned as the *smart, value-packed wearable brand*: the most feature-rich smartwatch for the money, with a growing push into health tracking and premium audio. The map below plots both against competitors.

Figure 2: Perceptual (positioning) map. Illustrative: placements are the author's analytical judgement from brand communication, price tiers and product mix, not survey data.

3. Marketing Mix (4Ps) Comparison

	boAt	Noise
Product	Widest range: Airdopes (TWS), Rockerz (neckbands and headphones), Stone and Aavante (speakers/soundbars), Wave and Lunar smartwatches, Nirvana premium audio, chargers and cables. Strength is design, bass-heavy sound signature and fast launches. Weakness: reputation for 'good for the price' rather than best-in-class quality.	Focused range: ColorFit and Pulse smartwatches, Buds earphones, Luna smart ring, NoiseFit app. Strength is features per rupee (AMOLED displays, Bluetooth calling, health tracking). New: 'Sound by Bose' audio device. Weakness: narrower audio and accessory range.
Price	Value-based, mass-premium pricing; historical sweet spot about Rs 999 to Rs 4,999. Avoids the cheapest tier and relies on frequent sale-event discounts rather than permanently low prices.	Aggressive value pricing, strongest in entry and mid smartwatch bands (mass-market). Pricing power is pressured by new entrants and heavy discounting; premium ladder only now being built.
Place	Started on Amazon/Flipkart, now omnichannel: own website, large-format retailers (Croma, Reliance Digital, Vijay Sales), 5,000+ retail stores (company statement, 2021) and a growing international presence (GCC, Nepal).	Online-first (Amazon, Flipkart, own site, quick commerce such as Zepto; historically 80%+ of sales online). CEO targeted a deeper offline push from about 20,000 stores. Also now online distributor for Bose in India.
Promotion	Celebrity and influencer heavy: cricketers (Hardik Pandya, KL Rahul and others), Bollywood stars, IPL team tie-ups, music and pop-culture campaigns. Advertising and promotion spend Rs 389.7 cr in FY25 (up 6.5%).	Product-led, performance-marketing and influencer approach; ambassadors include Virat Kohli (2022) and Neeraj Chopra. Marketing spend cut 37% to Rs 180 cr in FY25, less than half of boAt's.

Table 2: 4Ps comparison. Product names and ambassador lists reflect public brand information and may change; price bands are indicative.

Reading the mix: boAt's mix is built around brand pull (heavy promotion, wide distribution, premium sub-line), whereas Noise's is built around product push (features per rupee, online efficiency). IDC notes that offline earwear grew 9.4% in 2025 while offline smartwatches fell 10.5%, a signal that physical retail matters most in audio, which is boAt's stronger category.

4. Branding & Consumer Perception

boAt's brand image is loud, youthful and expressive: bold colours, music-first language ('Plug into Nirvana'), the 'boAtheads' community and cricket and Bollywood association. Consumers see it as stylish, trendy and good value, and as a default choice for earphones. The risk is a 'mass-brand' perception that limits its ability to charge premium prices, and brand fatigue from heavy celebrity exposure.

Noise's brand image is smart, practical and tech-forward. It earned trust by being first with features at accessible prices and by leading smartwatches for years. The Bose partnership gives it a credibility lever in audio. Its risk is being seen as a 'smartwatch brand' with weaker emotional pull than boAt and little pricing power.

Segment	Who appeals more	Why
Youth / style-led	**boAt**	Cultural relevance, design, celebrity and music association
Value-conscious	**Both** (Noise slightly in watches)	Both price aggressively; Noise offers more features per rupee in smartwatches
Fitness / health-minded	**Noise**	Smartwatch leadership, NoiseFit ecosystem, health tracking features
Audio enthusiasts	**boAt**	Leads TWS and over-the-ear audio (44.4% share in over-the-ear, Q2 2025)
Premium / upgraders	**Open contest**	boAt Nirvana vs Noise-Bose tie-up; Apple, Samsung and JBL dominate the top end

5. Key Insights & Recommendations

5.1 Who is winning where?

Segment / metric	Winner	Evidence
Overall wearables share	boAt	29.2% (CY2025 and Q2 2026) vs Noise's 13.1% in Q2 2025
Smartwatches	Noise	26.6% vs boAt 14.1% (CY2025); lead down from 30.9% in Q2 2025
TWS earbuds	boAt	31.9% share in Q2 2025; boAt also leads over-the-ear
Financial health	boAt	Rs 60 cr profit, EBITDA margin 4.6% in FY25; Noise EBITDA margin 1.7%
Marketing muscle	boAt	Ad and promotion spend Rs 389.7 cr vs Noise Rs 180 cr
Capital efficiency in downturn	Noise	Cut spending in line with revenue, stayed profitable, kept bootstrapped culture

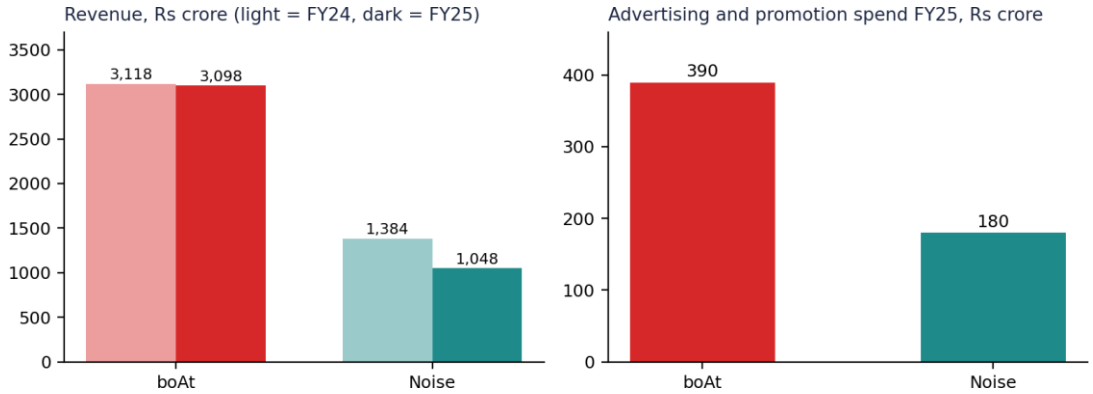

Figure 3: Revenue (FY24 vs FY25) and FY25 advertising spend. Sources: Entrackr, Storyboard18, Startuptalky (company filings as reported).

5.2 Strategic recommendations for Noise

1. Defend smartwatch leadership by moving up the price ladder. Noise's share fell from 30.9% (Q2 2025) to 26.6% (CY2025) as entry-level volumes shrank. IDC reports advanced smartwatches grew 94.8% in Q2 2026. Noise should expand its mid-to-premium smartwatch range (better sensors, health insights, stronger build) so that it grows in value, not just units.

2. Use the Bose partnership to break into credible premium audio. boAt owns mass audio, but Noise can occupy the 'trusted sound quality' space. Make 'Sound by Bose' the hero of a premium audio line, and communicate the association clearly in advertising and on packaging.

3. Build a sharper emotional brand, not only a feature brand. With less than half of boAt's marketing spend, Noise cannot win a celebrity-volume contest. Invest instead in a defined identity (for example, 'smart health and performance companion'), community content, athlete and creator partnerships such as Neeraj Chopra, and the NoiseFit app as a retention loop.

4. Scale offline selectively, with brand-protection built in. IDC flags offline earwear growth and rising counterfeits in physical retail. Noise should deepen its presence in organised electronics chains and experience zones in Tier-1/2 cities, and invest in authenticity assurance to protect brand credibility.

Counter-view for boAt (brief): boAt's own challenge is the reverse, to fix a weak #2 in smartwatches (14.1%) and convert audio leadership into premium pricing power; its IPO funds and Rs 150 cr marketing earmark are aimed at exactly that.

6. Limitations

This is a secondary-research study. Market-share figures are IDC India estimates reported through press releases, and the periods differ (calendar year 2025, Q2 2025, Q2 2026). Company financials are from regulatory filings and media reports, and Noise (private) discloses less than boAt. The positioning map is an analytical judgement, not primary consumer research. Product lines, prices and ambassadors change frequently.
